Introduction

Introduction to the Derwent Literature Services Journal List

The aim of this guide is to provide users of the Derwent Drug File, Derwent Crop Protection File, Derwent Veterinary Drug File, Derwent Gene Therapy Database and Derwent Biotechnology Abstracts, with comprehensive data of the source journals and selection guidelines used to identify articles for abstracting and indexing.

Current titles

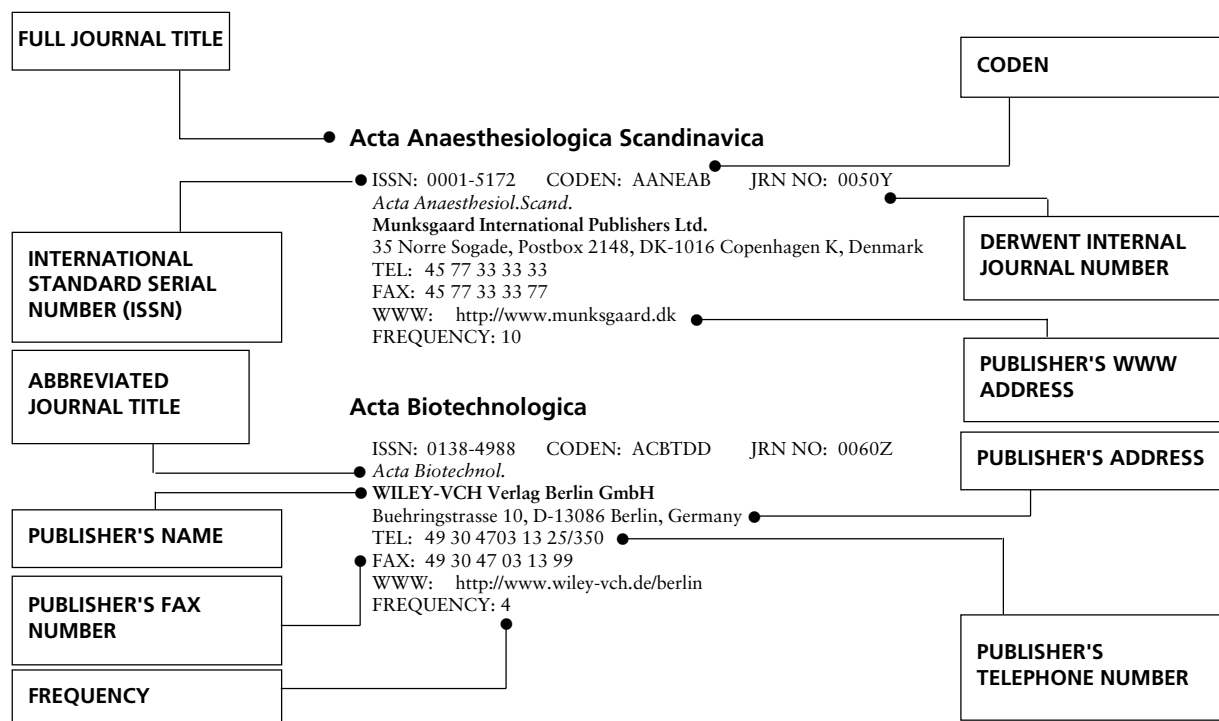

This is a list of all journals currently covered by the Derwent Literature Services.

In the Current Titles list, journals are arranged in alphabetical order by full journal title. The full journal title is followed by the International Standard Serial Number (ISSN), the five-letter international CODEN and the Derwent Internal Journal Number, and the abbreviated journal title.

Also included are the name and address of the publisher plus the telephone and fax numbers, World Wide Web (WWW) address (where available), and the publication frequency.

Note: Whilst every effort has been made to provide suitable and correct addresses at the time of going to print, some publishers may have local offices or agents in different parts of the world and may have different addresses for correspondence, subscriptions and enquiries.

Sample entries from the Current Titles list

Additional Lists

Changes in the Derwent Journal coverage are noted in the sections Titles Added to the Derwent Literature Services Journal List, Title Changes in the Derwent Literature Services Journal List and Titles Deleted from the Derwent Literature Services Journal List. These sections are alphabetical listings of the full journal title.

Publishers List

This is a listing of the Publishers of those journals covered by the Derwent Literature Services. The list is organised in alphabetical order of the Publisher's full name. Journal titles are given in full.

Selection Guidelines

This section outlines Derwent's selection criteria for each of the Literature Services.

*Derwent Literature Services
Selection Guidelines*

Derwent Literature Services

Selection Guidelines

Derwent Drug File Selection Guidelines

The aim of Derwent Drug File is to provide a database meeting the scientific documentation needs of the pharmaceutical industry, which includes all important articles relating to drug development, evaluation and use. This principle governs the selection of articles concerned with analysis, biochemistry, chemistry, endocrinology, immunology, medicine, microbiology, pharmaceuticals, pharmacology, physiology, and toxicology. To this end, the articles are selected in such a way as to ensure that the database contains the important papers from as wide a range of journals as possible.

All articles giving significant information on one or more drugs (including vaccines) are selected whether the subject of the paper is chemistry, biochemistry, pharmaceuticals, pharmacology, medicine, etc.

This means that all papers describing isolation, synthesis, formulation, pharmacology, toxicology, metabolism, clinical trials, etc. of novel or established drugs are included. Routine references to established drugs (e.g. case reports, discussions, editorials, commentaries) are not included unless the paper reports some significant result (e.g. an adverse effect). Review papers are treated on their merits, but generally only those discussing drugs in some detail and giving a significant number of references are selected.

The following are not selected:

- a Papers which do not mention drugs, unless they are concerned with topics of related importance such as potential screening methods, aspects of formulation, etc.
- b Papers containing relatively trivial references to drugs, e.g. use as reagents or pharmacological tools.
- c Purely incidental drug therapy unrelated to the subject of study.
- d Routine use of anaesthetics and diagnostic agents.
- e Generic drug groups (e.g. steroids, cardioglycosides) unless these are the main subject of the paper.
- f Drug legislation, regulatory affairs, documentation, sales.
- g Letters containing no original data.

- h Drug abuse, alcoholism, tobacco smoking.
- i Environmental pollutants, poisons, non-drug carcinogens.
- j Items of interest only to Derwent Veterinary Drug File (veterinary) or Derwent Crop Protection File (pesticides, plant protection and related subjects), or Derwent Biotechnology Abstracts.

Derwent Biotechnology Abstracts Selection Guidelines

Scientific papers and patents are selected for inclusion in Derwent Biotechnology Abstracts according to the criteria listed below.

Positive List

1. The application of microorganisms, animal or plant tissue cultures, enzymes, or any other cellular or subcellular biological systems to the production of pharmaceuticals, pesticides, chemicals, enzymes, single cell protein, energy, etc. on an industrial scale. Includes both de novo synthesis and specific biochemical modification of previously synthesized compounds.
2. All aspects of the technology of fermentation or the industrial application of enzymes, including bioreactor design, systems control, computerization, culture nutrition, scaling-up problems, mathematical models, cell and enzyme immobilization and related topics.
3. Downstream processing; all aspects of the isolation and purification of the products of biotechnological processes, including the design of relevant apparatus. Isolation of industrially useful enzymes from animal or plant tissue.
4. Screening, isolation and characterization of microorganisms or enzymes with potential industrial application. All aspects of genetic modification of cells to improve strains for industrial use or to prepare cells with novel properties of industrial value; includes isolation, synthesis and mapping of genes, their incorporation into suitable vectors, their insertion into host cells and all related studies of enzymes, plasmids, viruses and genetic techniques used for these purposes.
5. Animal and plant cell culture with relevance to industrial application: includes techniques, nutrition, cell immortalization, cell hybridization, culture vessel design, etc. Production of monoclonal antibodies, interferon, lymphokines, plant secondary metabolites, etc. by cell culture. Application of cell culture to genetic manipulation and to plant propagation (see Sections 4 and 6).
6. Plant genetics related to strain improvement, when carried out using cell systems or genetic manipulation techniques. Propagation of plants via cell or tissue culture.

7. Biological control agents; including the isolation of new strains of potential agricultural application, mass propagation, and strain improvement. This also covers microorganisms used to protect plants from frost damage.
8. Biophysics; application of organisms, enzymes, DNA, etc. in fuel cells, biochips, biosensors including biochemical electrodes and similar appliances.
9. The use of intact microorganisms, cell products, etc. in the extraction of minerals from ores and wastes, enhanced oil recovery, or in oil/gas desulfurization, etc.
10. The use of biological systems in industrial waste disposal or to remove or detoxify industrial and agrochemical products in the environment.
11. Recombinant DNA methods useful in biotechnology fields, and all patents on new DNA probes/primers, etc.

Negative List

1. Papers dealing exclusively with the application of the products of biotechnological processes in non-industrial fields, e.g. therapy, diagnosis, farming, etc.
2. Biological methods of non-industrial waste disposal when unrelated to the processing of industrial waste and when no economically valuable product (e.g. methane, biomass, fertilizer) is formed.
3. Brewing and the preparation of established fermented foods and foodstuffs. Papers on the preparation of single cell protein or chemicals used as food additives (e.g. amino acids, vitamins, flavours, colouring agents, growth promotants) should be selected, however.
4. Use of synthetic oligonucleotides or peptides as drugs.

Derwent Crop Protection File Selection Guidelines

The Derwent Crop Protection File deals with all aspects of products (other than fertilizers) and measures which:

- a have some beneficial action on crops, forest trees, or other plants;
- b protect plants against pests, diseases, or the detrimental effects of weeds;
- c protect stored products, timber, textiles and other material; or
- d protect man and animals against arthropods and other vectors.

All articles giving significant information on one or more pesticides are selected whether the subject of the paper is analysis, chemistry, biological properties, pest control, toxicity, etc. This means that all papers describing chemical, biological or physical methods for pest control, control of plant pathogens, weed control and plant growth regulation are included.

Papers describing application techniques, biological properties of pesticidal agents and toxicity studies (including studies of residues) in man and animals are also included, as are reports of experimental testing methods for products, legislation and regulations, and statistical evaluation and documentation.

Review papers, editorials, etc. are treated on their merits, but generally only those discussing pesticides in some detail and giving a significant number of references are selected.

Unless covered by the above, papers not concerned with pesticides are not included. In particular, the following are not selected:

- a Selection and breeding of crop varieties for resistance to pests and diseases.
- b In vitro plant propagation using routine techniques and standard plant hormones such as IAA, IBA, NAA and kinetin. (However, studies of the new generation of synthetic plant growth regulators are included.)
- c Studies of endogenous plant or insect hormones.
- d Routine papers on the pharmacology and toxicology of DDT and other 'old' pesticides.
- e Items of interest only to Derwent Drug File (human), Derwent Veterinary Drug File (veterinary), or Derwent Biotechnology Abstracts.

In addition, Derwent Basic patents from section C have been selected from the start of 1996. Patents selection is based on the following:

- a New agrochemicals
- b New formulations
- c New combined preparations

Note Antifouling agents are specifically excluded.

Derwent Veterinary Drug File Selection Guidelines

The Derwent Veterinary Drug File covers all aspects of veterinary drug and vaccine development, evaluation and use for the promotion of animal health, growth and production.

All articles are selected which give significant information on one or more veterinary drugs (including vaccines and pesticides in an animal health context) related to:-

- a Treatment and prevention of disease
- b Drug metabolism
- c Growth promotion
- d Breeding manipulation
- e Toxicology, including adverse effects and intoxications
- f Chemical synthesis
- g Anaesthesia, immobilization and restraint
- h Pharmaceutics
- i Drug analysis, with particular regard to drugs and residues in foodstuffs, animal tissues and products (meat, milk and eggs, etc.)

Papers on animal nutrition are selected when specific nutritional requirements are studied.

Unless covered by the above, papers not concerned with drugs are not included. In particular, the following subjects are not selected:

- a Anatomy, surgery and general pathology
- b General animal husbandry and rearing
- c Routine foodstuffs
- d Preservation of animal products such as meat, milk and eggs
- e Diseases at slaughter
- f Poisoning with plants and natural substances, or environmental pesticides

- g Geographical incidence of disease
- h Serological methods of diagnosis
- i Culture of veterinary pathogens
- j Items of interest only to Derwent Drug File (human), Derwent Crop Protection File (agrochemical and related subjects), or Derwent Biotechnology Abstracts.

Derwent Gene Therapy Database Selection Guidelines

The Derwent Gene Therapy Database covers all aspects of the application of nucleic acids in the therapy and prevention of human diseases, and related topics. Scientific papers and patents are selected for inclusion in the Derwent Gene Therapy Database according to the criteria listed below.

1. All aspects of gene transfer and gene manipulation in mammals:
 - a. gene transfer systems and vectors
 - b. gene manipulation (mutagenesis, deletion, insertion, substitution and replacement)
 - c. antisense
 - d. ribozymes
 - e. triple helix
 - f. use of oligonucleotides and their analogs as drugs
2. Human Genome Project (methods and apparatus used, updates on project progress, etc.)
3. Human disease genes (use of in gene therapy, etc.)
4. All gene therapy clinical trials
5. Regulatory and ethical issues concerning gene therapy
6. Animal disease models/transgenic animals
7. Computer software/hardware for mapping, gene therapy, etc.
8. Physical methods for gene transfer (e.g. electroporation, microprojectile bombardment, direct injection, aerosol inhalation, bone marrow transplantation, etc.)
9. Nucleic acid vaccines (gene-based vaccines, genetic vaccines)

10. Intracellular immunization

11. General review papers on human diseases

12. General methods which provide a basis for gene therapy techniques:

- a. tumor-infiltrating lymphocyte and cytotoxic T-lymphocyte in vitro cell culture
- b. in vitro/in vivo transduction methods using virus vectors
- c. packaging cell cultures
- d. hematopoietic stem cell systems

Journal Line Layout

The following notes apply to the journal line layout in the abstracts publications of Derwent Drug File, Derwent Veterinary Drug File and Derwent Crop Protection File. The online layout of the journal line is similar on all hosts. The CODEN and ISSN, if available, are provided in separate fields.

The great majority of the Journals in the services are published as numbered volumes comprising numbered issues, e.g. Cancer Research, Volume 59, Issue No.1 published in 1999.

The Journal Line, for a paper on pages 190 to 196 of the above journal, would appear in the heading as:

Cancer Res. (59, No. 1, 190-96, 1999)

A small number of Journals carry varying designations which do not allow them to fit into the above layout; such journals are dealt with according to the following:

- a No volume number given, merely the year of publication; the year of publication then replaces the volume number in the Journal Line, e.g.

Eur.J.Org.Chem. (1999, No. 8, 805-09)

- b No issue number given, but the month of publication; the month then replaces the issue number in the Journal Line, e.g.

Br.J.Psychiatry (174, Feb, 251-53, 1999)

(Abbreviations are Jan, Feb, Mar, Apr, May, June, July, Aug, Sep, Oct, Nov, Dec; the full stop normally indicating abbreviation is omitted.)

- c Publications which have only a volume number; in view of the absence of an issue number, the pagination follows immediately after the volume number, e.g.

Fortschr.Arzneimittelforsch. (42, 53-132, 1994)

- d The volume or issue designation consists of a number and a letter; the letter then follows the volume or issue number, respectively:

Am.J.Med. (106, No. 1A, 423-39, 1999)

This is to be differentiated from the case of those Journals consisting of several distinct parts, each identified by a letter, e.g. J.Vet.Med.A; the letter appears in the Journal title, not with the Volume number.

- e Instead of an issue number, a part number is given:

J.Gen.Virol. (80, Pt. 9, 2499-503, 1999)

- f Instead of an issue number, an article number is given:

Ann.N.Y.Acad.Sci. (868, Art. 4, 162-36, 1999)

- g The Journal is identified only by the number of the Meeting which it reports:

Abstr.Pap.Am.Chem.Soc. (217 Meet., Pt.2, ORGN266, 1999)

- h The Journal is identified by a volume number and the number of the Meeting which it reports:

Proc.Am.Assoc.Cancer Res. (40, 90 Meet., 531, 1999)

More than one type of variation may apply to any one Journal. Other variations which may occasionally be encountered in any of the Journals are:

- i More than one issue may be published within the same cover:

Dev.Brain Res. (113, No. 1-2, 158-62, 1999)

- j A supplement may be published, serially numbered (or identified by a letter), as a part of a numbered volume:

Wien.Klin.Wochenschr. (11, Suppl. 11, 10-11, 1999)

Eur.Heart J. (1, Suppl. A, 10-15, 1999)

or there may not be a volume number given, only a supplement number:

Acta Vet.Scand. (Suppl. 91, 80-93, 1999)

k If the volume is spread over a 2-year period, both years are given: 1985-1986

Other variations occur from time to time, such as special issues (Spec.Issue), special supplements (Spec.Suppl.) to individual issues, abstract supplements (Abstr.Suppl.), supplements published in parts, Sections (Sect.), Appendices (Append.), etc. In such cases the details are presented in hierarchical order.

l For a given journal consistency is desirable, especially where the citation is ambiguous and tautologous.

Journal Line Layout for Derwent Biotechnology Abstracts

The journal line layout in the Derwent Biotechnology Abstracts hardcopy journal is similar to that of Derwent Drug File, Derwent Veterinary Drug File and Derwent Crop Protection File, and has the format:

Biotechnol.Bioeng. (1999) 66, 4, 970-73

Thus, the journal name is followed by the year of publication, volume and issue numbers, and pagination. The online layout of the same citation would be similar on all hosts.

Pagination

i Where the page numbers of the first and last pages of an article are of one or two digits only, they are given in full. If the numbers contain three or more digits, the first page is given in full, but for the last page the last two digits only are given (unless there is also a change in the hundreds digit, when this is also given):

9-15, 310-15, but 396-404

ii In some journals the pagination is not continuous, usually because of inserted advertising matter. In such cases, those pages which are continuous are treated as defined above, single pages being in full:

452-69,472,475-76

- iii Where a Journal is sectionalized, and these sections are indicated by the addition of a letter to the page number, or a change to Roman numerals, these are given in the Journal Line. In this case the full numbers are given. When page numbers include a letter the full number is given:

P101-P104

- iv Some Journals have dual pagination, one series of numbers being the pages within the particular issue, the second series being the pages within the volume to which the issue belongs. The second series (volume pagination) is that used in the Journal line.

When the volume pagination covers only part of the issue, and articles are selected from the remainder, then the issue pagination together with any identifying data, e.g. brackets, are given.

- v In the case of some abstracts Journals, the pages are not numbered. The serial number of the abstract then replaces the page number. This too, may be accompanied by a sectional identification such as ORGN114. Similarly, when two abstracts are combined, the entry is of the form

ORGN15,16.

- vi Very rarely no page numbers are printed. In these cases the total number of pages in the article is given:

1 p. 15 pp.

- vii Where the page numbers of a Supplement are prefixed by Roman numerals which are also the Supplement number, the prefix is discarded. For example, Circulation Vol.2 No. 2, Suppl.II,II-15-II-25 is given as:

Circulation (2, No. 2, Suppl. 2, 15-25)

- viii Where the pagination of a Supplement includes a letter, the letter and complete first and last numbers are included, e.g.

S35-S441 S180-S188 35S-41S
